

VYAPARI MITRA

India's Vernacular AI Copilot for Every Paytm Merchant

Track: Merchant Growth AI

Powered by Sarvam AI

+ Fraud Shield

Problem Statement

India's Paytm merchants get payments infrastructure — but not a growth partner

Language barrier

Most kirana/local merchants think and decide in Hindi or a regional language — not English dashboards or app menus.

No business insight

Sales, top products, and complaints sit in raw transaction data merchants never actually see or understand.

No time to analyze

A shopkeeper running the counter all day has no time to read analytics — they need a 3-second spoken answer.

Fake-payment fraud

RBI FY25: 13,516 digital-payment fraud cases worth ₹520 crore; NPCI projects UPI fraud incidents to cross 1.1M — QR-swap and fake-screenshot scams hit small merchants daily.

the real gap

Proposed Solution

An AI business partner that talks to merchants in their own language

1

Merchant asks

"Is hafte ka sales kaisa raha?" — in Hindi/Hinglish, by voice or text

2

Sarvam AI understands

Native Indian-language LLM reads intent + merchant's own sales/product/rating data

3

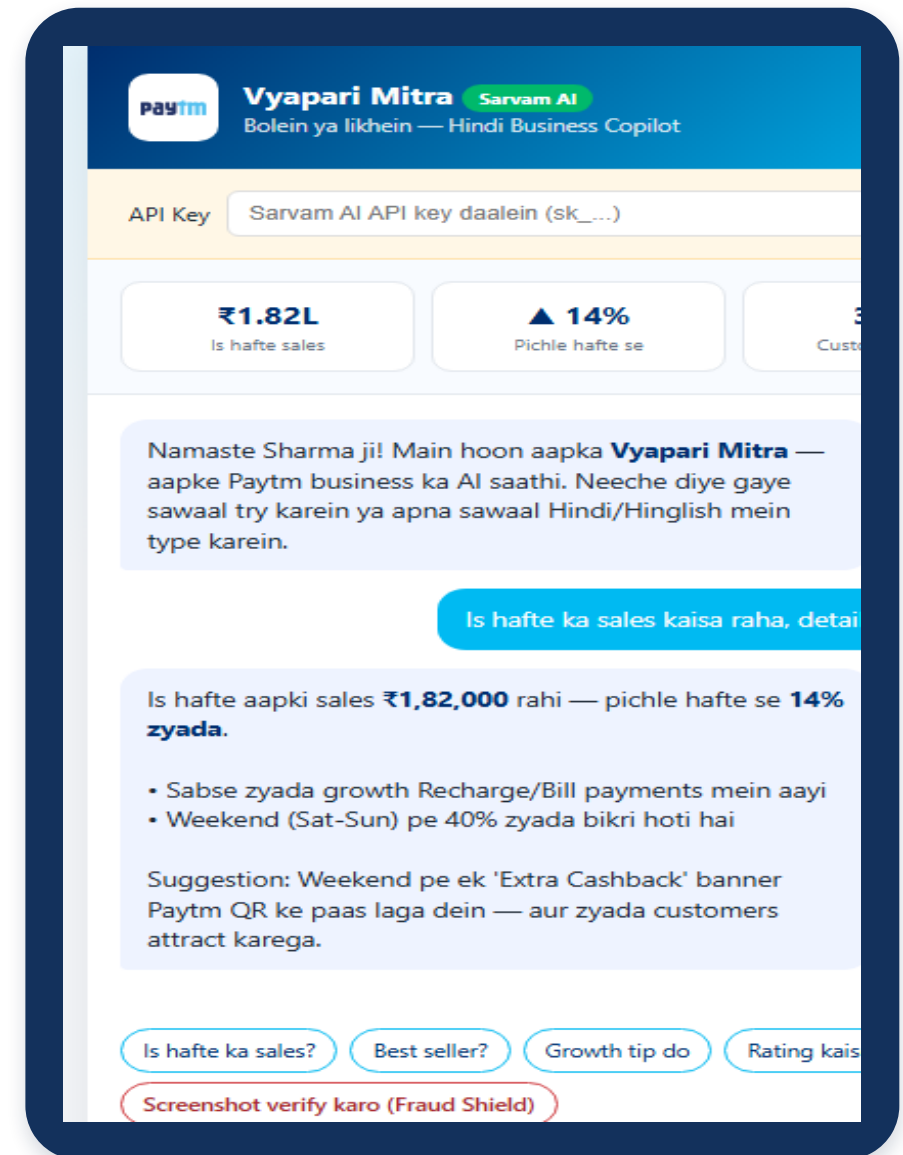

Vyapari Mitra replies

Plain-language insight + ONE concrete action — never just a chart or number

4

Merchant acts

One-tap suggestions: launch cashback, bundle a product, fix a complaint driver

Our Moat: Real-Time Fraud Shield

A feature every other 'merchant insights' bot skips — because it protects money, not just gives advice

nobody else builds this

The scenario Paytm already fights every day

- ! Fraudsters paste a fake QR sticker over a merchant's real QR — every scan pays the attacker, not the shop.
- ! Or a customer shows a fake “payment successful” screenshot from a modified app and walks off with the goods.
- ! RBI FY25: 13,516 digital-payment fraud cases worth ₹520 crore. NPCI projects UPI fraud incidents to cross 1.1M.
- ! Sep 2026, Basti (UP): two arrested for exactly this — fake UPI screenshots, cash taken, no real payment made.

How Vyapari Mitra closes it

- ✓ **Voice-verify any screenshot**
Cross-checks the real Paytm settlement ledger in real time, in Hindi.
- ✓ **Catch silent QR-swaps**
Flags it when Soundbox stays quiet while the merchant says sales are happening.
- ✓ **Zero new hardware**
Runs on the Soundbox + settlement data Paytm already has.

Namaste Sharma ji! Main hoon aapka **Vyapari Mitra** — aapke Paytm business ka AI saathi. Neeche diye gaye sawaal try karein ya apna sawaal Hindi/Hinglish mein type karein.

Customer ne payment ka screenshot dikhaya, kya check karo

Fraud Shield check: Maine aapka Paytm settlement ledger abhi cross-check kiya — pichle 11 minute mein is QR pe koi naya payment nahi aaya, sirf ₹120 ka purana confirmed transaction hai.

Iska matlab customer ka screenshot **fake ho sakta hai** — asli Paytm payment aane par Soundbox turant bolta hai.

Suggestion: Jab tak Soundbox 'Payment Received' na

Actual output from the working prototype

Live Demo — Vyapari Mitra in Action

Working prototype · web app · Sarvam-105B model · github.com/Ayush-170906/vyapari-mitra

1

Merchant ka sawaal

“Is hafte ka sales kaisa raha, detail mein batao” — typed in Hinglish, exactly like a shopkeeper would ask a friend.

2

Merchant ka apna context

Sarvam AI ko un's sales (₹1.82L, +14%), top products, aur ratings pehle se pata hain — koi generic jawab nahi.

3

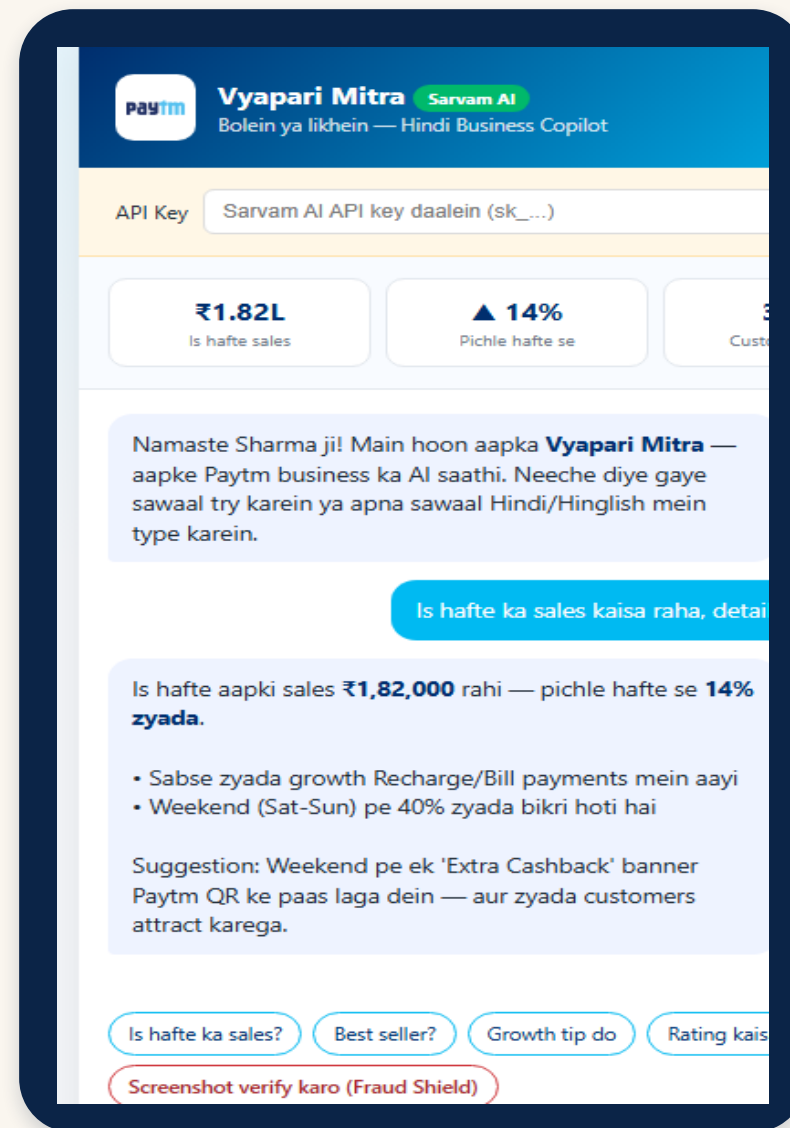

Action-first jawab

Sirf number nahi — ek specific suggestion: 'Weekend pe Extra Cashback banner Paytm QR ke paas laga dein.'

4

Ek-tap follow-up

Quick-suggestion chips se merchant turant agla sawaal pooch sakta hai — koi typing friction nahi.

Technology / Tech Stack

Lean, API-first stack — built to demo in hours, scale to millions of merchants

sponsor tech

Sarvam-105B

Indian-language LLM — understands Hindi/Hinglish merchant queries natively, no translation layer

Web App (HTML/JS)

Lightweight, installs nowhere — works on any merchant's phone browser, low-bandwidth friendly

Paytm Merchant APIs

Sales, settlement, and QR transaction data feed the copilot's real-time business context

n8n Workflows

Automates the suggested action itself — e.g. auto-triggers a cashback campaign, not just advice

Cognee Memory

Persistent merchant memory layer — copilot remembers past patterns across sessions

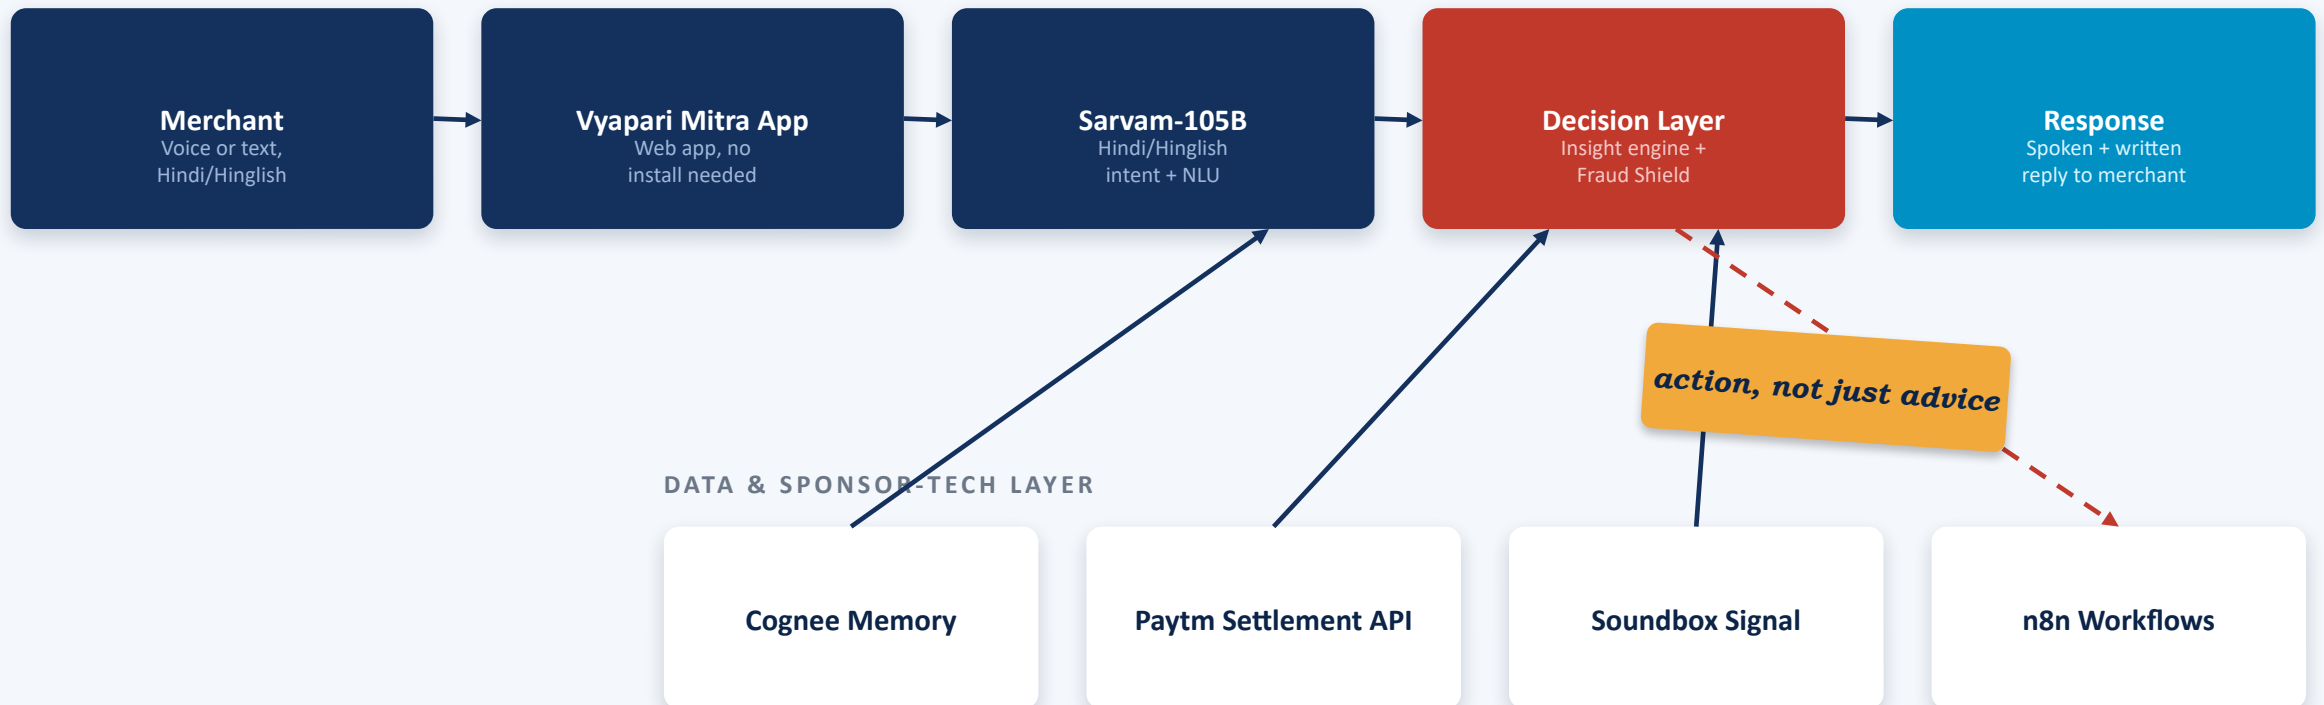

PostgreSQL

Stores merchant profiles, transaction history, and conversation logs

System Architecture

One request, five hops — from a merchant's voice to a verified action

Why Vyapari Mitra Wins

A straight, feature-by-feature comparison against every category of alternative on the market

the full picture

Capability	Generic Chatbots	Analytics Dashboards	Fraud-Detection Apps	Vyapari Mitra
Understands Hindi/Hinglish natively	X	X	X	✓
Grounded in THIS merchant's own data	X	✓	X	✓
Gives ONE concrete action, not raw numbers	X	X	X	✓
Real-time fraud & QR-swap protection	X	X	✓	✓
Can trigger the action itself (n8n)	X	X	X	✓
Zero new hardware or app install	✓	✓	X	✓

Impact & Benefits

4M+

Paytm merchants who could get a growth copilot instantly, at near-zero marginal cost

10+

Indian languages Sarvam AI can extend Vyapari Mitra to beyond this Mumbai demo

0

New apps to install — works inside the merchant's existing Paytm touchpoints

For Merchants:

Higher sales through personalised nudges, plus real money saved from fraud caught before it happens

For Paytm:

Fewer fraud disputes and chargeback complaints to resolve — and a daily reason to open the app beyond payments

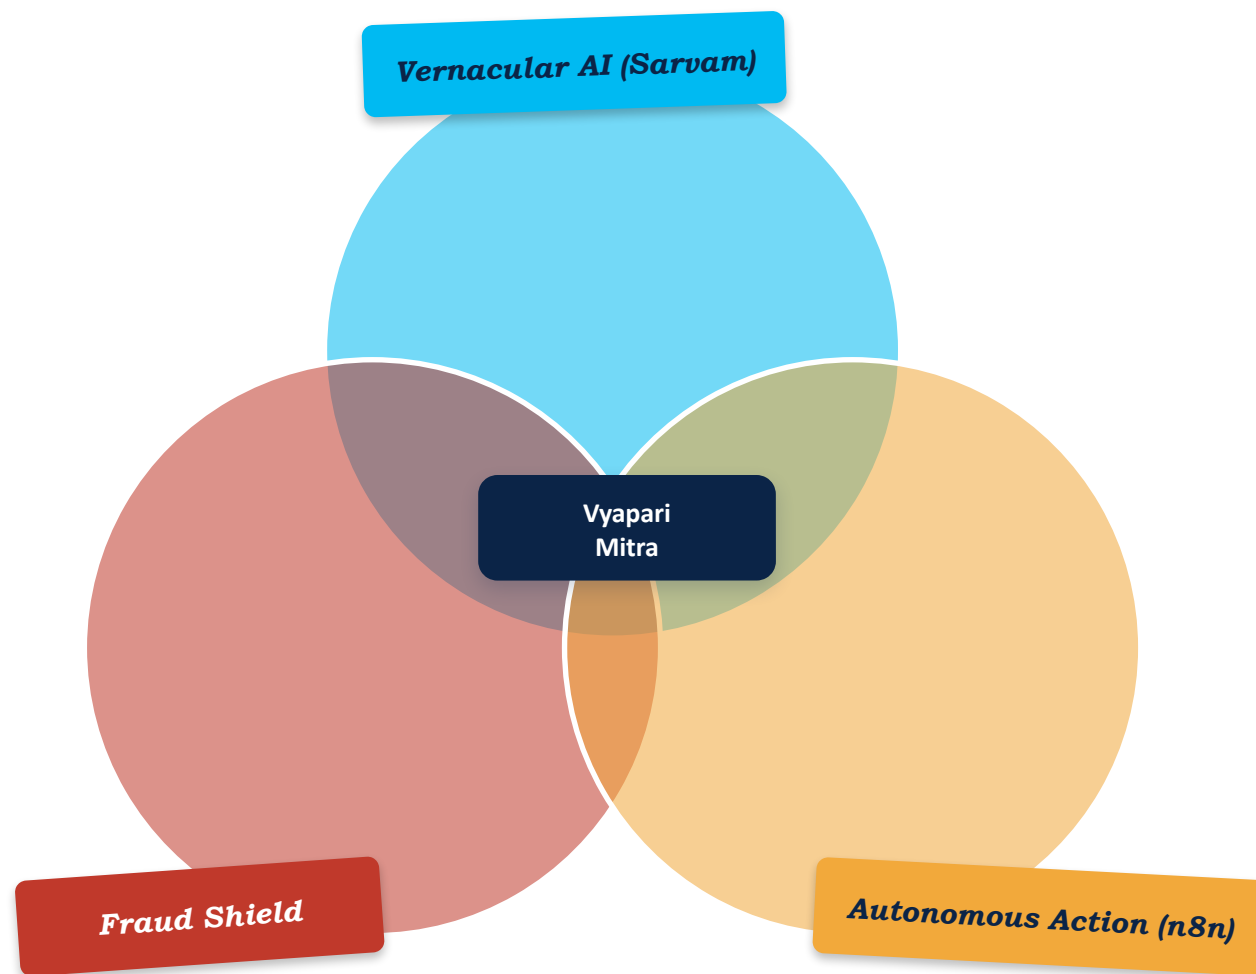

For India's Economy:

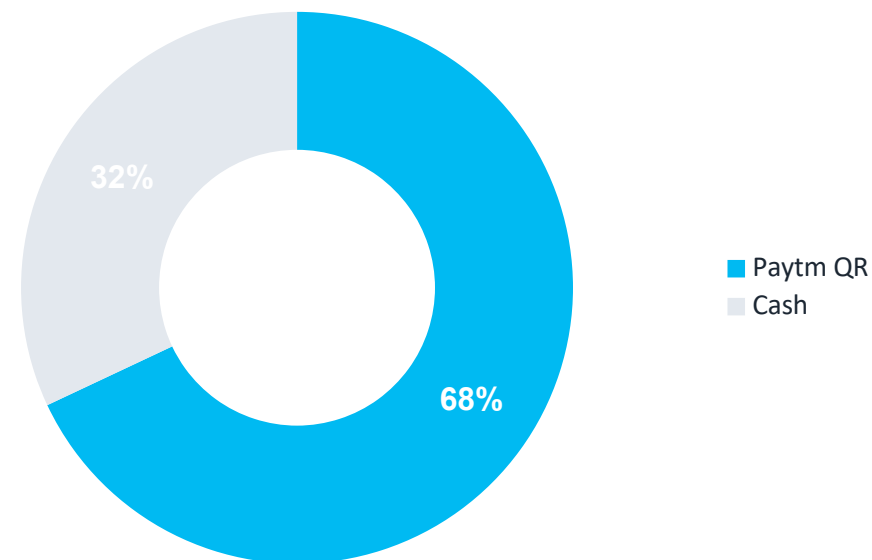

Millions of small businesses get enterprise-grade growth intelligence and fraud protection in their own language

Why This Wins

Three capabilities nobody else combines, on top of the data merchants already generate

Payment Channel Mix

68% of transactions already run through Paytm QR — exactly the ledger Fraud Shield cross-checks against.

Business Model

Built to plug into Paytm's existing merchant monetisation — not a separate product to sell

Freemium Copilot

Free basic insights for every merchant; premium tier for automated campaign execution & deeper analytics

Merchant Subscription Add-on

Bundled inside existing Paytm for Business plans as a value-add tier — low CAC, existing distribution

Sponsored Growth Actions

Brands pay to surface relevant offers (e.g. supplier discounts) through the copilot's suggestions

Aggregated Insights (B2B)

Anonymised, aggregated local-commerce trend data licensed to FMCG/brand partners

Built compliance-first: no fund movement by the copilot itself — every payment/cashback action stays inside Paytm's existing NPCI-compliant rails; Vyapari Mitra only recommends and triggers, it never touches money directly.

Build with AI. Solve for India.

Vyapari Mitra — giving every Paytm merchant an AI business partner who speaks their language.
